#### **Abstract of the educational discipline**

Modern processes of globalization and the development of communication technologies create many opportunities for the implementation of the most daring business ideas on a global scale. But statistics shows that most of these ideas, even very promising, remain on paper, or attempts to implement them often fail. This is due to the inability of entrepreneurs to correctly formulate and present the idea of their business, to find sources of its financing, to plan and organize the implementation of its business idea, taking into account the most critical requirements and risks.

It should be understood that these tasks are not trivial. First of all, not every idea can be suitable for further commercial implementation. Second, when creating a new company to implement the startup of the project, there are a number of factors that should be taken into account. Thirdly, in conditions of fierce competition, even understanding the factors that affect the success of the startup of the project does not guarantee its successful implementation, and sometimes it is not effective even for large and successful corporations. So, one of the main reasons for the emergence, successful development and the continued existence of startups is the slowness and slowness of large corporations that successfully use existing products, and the development and creation of new ones are not nearly done. Therefore, startups, thanks to their mobility in terms of implementing new ideas, compete with large corporations.

Consequently, professionals who plan to start their own business in the future or participate in corporate business development projects need to acquire key knowledge and skills in business planning.

Purpose of the academic discipline "Business Planning" is to form a system of theoretical knowledge and applied skills in developing a business plan.

The tasks of the academic discipline are:

to learn the essence of planning and business planning;

to distinguish the features of different types of investment projects: startup, scale up, improvement;

to master the technique of development a Business Model Canvas;

to master key techniques of market analysis;

to master the technology of a business plan development;

to master the technology of developing a financial model for a business plan;

to learn the main principles and to master the technology of business plan pitching.

The subject of the academic discipline is a set of principles, approaches and methods of developing a business plan of an investment project.

Analysis of the sensitivity of the project. Risk mitigation

#### **Topic 8. Business plan pitching**

Executive summary of the project. Business plan formatting. Business plan pitching.

The list of laboratory classes, as well as questions and tasks for independent training is given in the table "Rating-plan of the discipline".

#### **Teaching and learning methods**

Achieving the expected learning outcomes is facilitated by the use of the following teaching and learning methods: discussions (topic 1 - 3, 5), modeling of the business situations (topics 1 - 3).

7); presentations (topics 1, 2, 6 - 8); case method (topics 1 - 7), set of individual competency-oriented works (topic 6), work in teams (all topics), research-based teaching (topics 2, 4, 6, 7).

#### **Assessment system of learning outcomes**

The system of assessment of the developed competencies takes into account the types of lessons, which, according to the syllabus, includes lectures, labs and independent training. Assessment of the developed competencies is carried out using a 100-point accumulation system.

Control measures includes current control during lectures, laboratory classes and individual tasks and is estimated by the amount of points scored (maximum score -60 points, minimum score that allows the student to pass exam -35 points) and final/semester control - is conducted in the form of a exam in accordance with the schedule of the educational process (maximum 40 points).

**Current control includes** assessment of applicant knowledge in the following forms and according to the following criteria:

competence-oriented task on topic – the ability to combine theory with practice when considering situations; logic, structure, style of presentation of the material when performing in the audience, the ability to justify their position (maximum score -5 points);

written test – understanding the theoretical material, degree of mastering the theory and methodology of the problems under consideration; the degree of mastering the actual material of the discipline; ability to combine theory with practice in the process of considering problem situations, problem solving (maximum score that an applicant can receive – 10 points);

presentation of individual task – depth and strength of knowledge, level of thinking, ability to systematize knowledge on individual topics, ability to draw sound conclusions, mastery of categorical apparatus, ability to find necessary information, systematize and process it; ability to conduct critical and independent assessment of certain problematic issues (maximum score: 5, 10, 15 and 15 points for 4 presentations respectively).

The maximum possible score for a specific task is set provided that the individual task of the applicant or his oral response to all these criteria. The absence of one or another component reduces the number of points. During the evaluation of laboratory work, attention is also paid to the quality, independence and timeliness of delivery of completed tasks to the teacher, according to the schedule of the educational process. If any of the requirements are not met, the points will be reduced.

**Final control** is represented in the form of exam and covers all topics of the educational discipline. The structure of the exam card is as follows:

- 1) 10 tests (maximum score -10 points);
- 2) 2 diagnostic practical task/problem situations (maximum score 15 points each, in total 30 points).

The maximum score on exam is 40 points.

#### **Independent training includes:**

- 1) study of theoretical material from the previous lecture before each further lecture;
- 2) collection, generalization, processing of information necessary for active work in practical classes and performing the individual scientific research task.

The total score in the points for the semester is: 60 or more points – the discipline is passed successfully, 59 or less points – the discipline is not passed.

Forms of assessment and distribution of points are given in the table "Rating plan of the educational discipline".
